CRAIG BOXER BUCKET

FEATURES AND BENEFITS

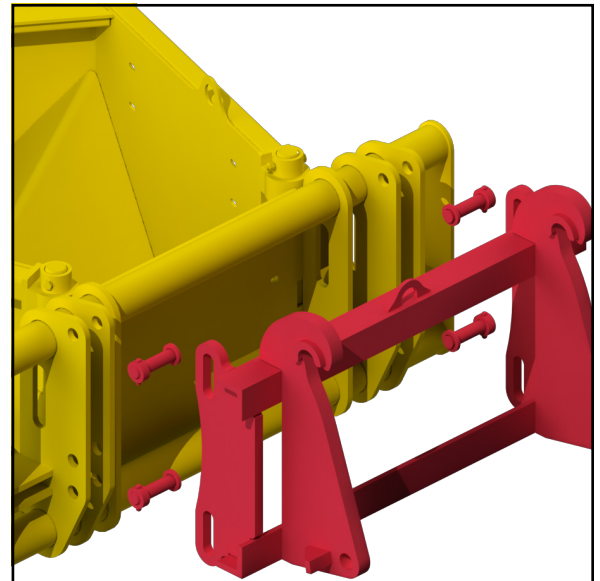

Designed for clearing leaves, brush, and other light materials, the Craig Boxer Bucket opens to collect a wide path of material and then closes for easy gathering of the material. The material can then be easily dumped into a truck, bin, or hopper by opening the Boxer Bucket over the truck or storage location.

MODULAR HOOK-UP DESIGN

Available in Craig Quik Key, OEM coupler, and pin-on configurations, the Craig Boxer Bucket features a modular bolt-on hook-up. The hook-up can be easily removed, allowing the bucket to be adapted to other machines in your fleet with the purchase of additional hook-ups - saving the cost of replacing the entire attachment.

MECHANICAL FLOAT/RIGID FIXED DESIGN

The built in mechanical float on the Boxer Bucket allows the attachment to float and follow the contours of the road for efficient cleaning up of materials on uneven surfaces. The float feature can easily be changed to be made rigid when scraping is required. This is achieved by the operator manually moving the pins on the hook-up into the rigid position.

Modular hook-up with built in float.

OVERSIZED PINS

For increased wear life all pins are oversized to provide years of trouble free operation.

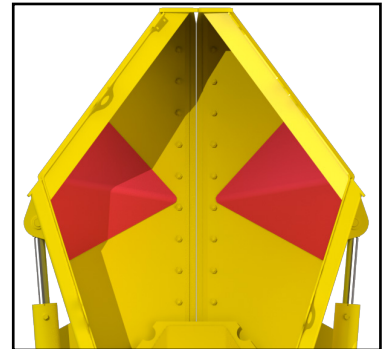

REINFORCED BOTTOM

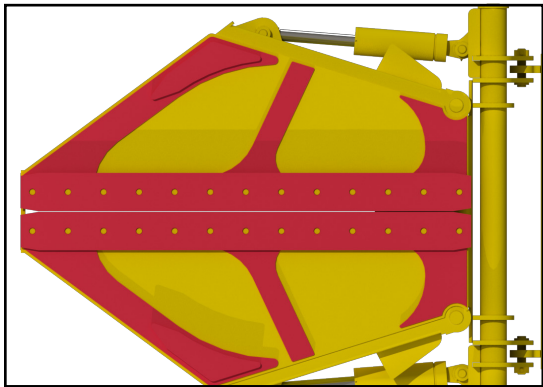

Additional gussets and reinforcing are installed to improve the strength of the Boxer Bucket.

SYNCHRONIZED OPERATION

For precise and consistent operation, the Craig Boxer Bucket comes with hydraulic valving for synchornized operation. This ensures that both sides open and close at the same time. The hydraulic valving will also enable the sides to self-correct should they ever get out of sync.

Reinforcing gussets.

Wear plate and two replaceable bolt-on edges.

WEAR PLATE

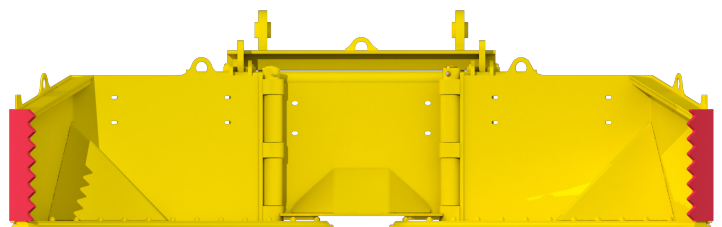

The bottom of the bucket comes with AR 400 wear pads to protect the bucket from wear and increase the overall life of the bucket.

REPLACEABLE BOLT-ON CUTTING EDGES

The Craig Boxer Bucket comes complete with two replaceable bolt-on cutting edges installed to increase the wear life of the bucket edges. Replacement edges are available through the Craig Customer Support Center or the equipment dealer.

SERRATED CLOSURE

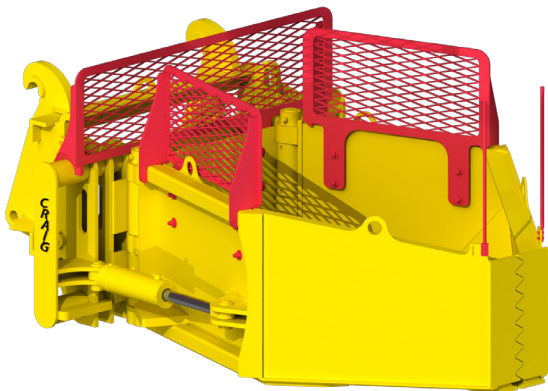

A serrated closure on the Craig Boxer Bucket improves the capability to grab large loads of loose material. Made of AR 400 wear plate for increased wear life.

Two serrated claws made of AR 400 wear plate.

CUSTOM OPTIONS

The Craig Boxer Bucket is available with visibility flags and custom bolt-on guarding. Call the Craig Customer Support Center today for more information.

Optional leaf guarding and visibility flags.
