LIGHT MATERIAL BUCKET

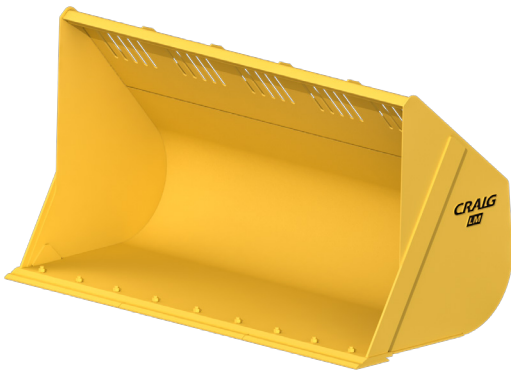

CRAIG™

LM / WC / CFB

LIGHT MATERIAL BUCKET

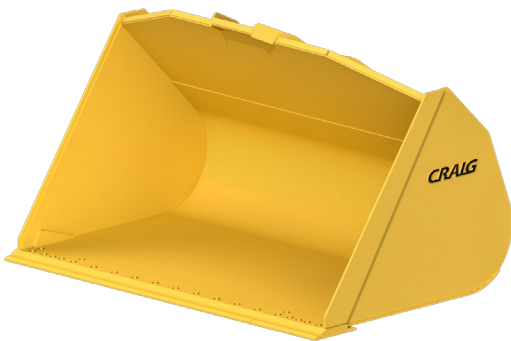

FEATURES AND BENEFITS

Engineered to maximize your machines capacity based on the material you're loading. The Craig Light Material Bucket (LM) is ideal for wood chips, saw dust, peat moss, snow, and any other light material you want to load to your machines capacity.

Designed specifically for the efficient handling and stock piling of wood chips, the Craig Wood Chip Bucket (WC) features a flat floor design and larger opening over the standard Light Material Bucket.

Due to fertilizers inability to heap, the Craig Fertilizer Bucket (CFB) is designed to maximize struck capacity. Features a long, flat floor, sloped side cutters, and a European style spill guard for improved material retention.

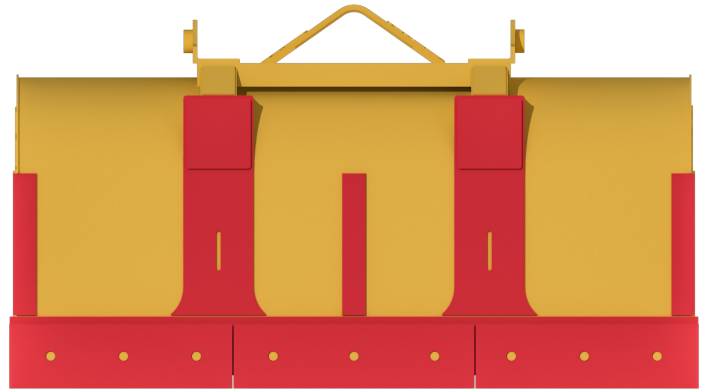

WEAR PLATE

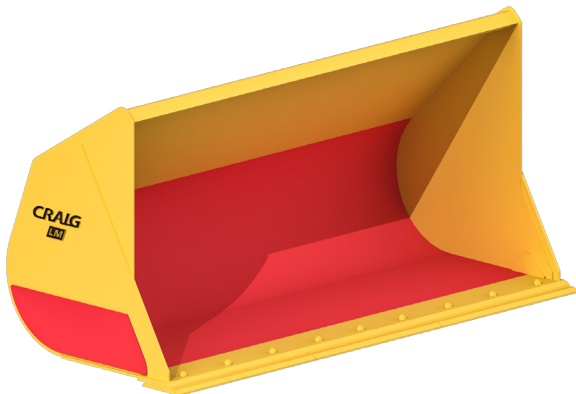

The bottom of the bucket comes with AR 400 wear runners and weld-on side cutters to protect the bucket from wear and increase the overall life of the bucket. Weld-on heel plates come standard, optional bolt-on heel plates available.

REPLACEABLE BOLT-ON EDGE

Each bucket drilled to work with the OEM brand of cutting edges requested comes complete with cutting edges installed.

Bottom of bucket features AR 400 wear plate runners and bolt-on replaceable edges.

Bucket featuring the Heavy Duty Upgrade

HEAVY DUTY UPGRADE

Featuring the addition of AR 400 weld-on cheek plates and an AR 400 bucket liner, the heavy duty upgrade is ideal for waste handling and other high impact, high abrasion applications. Bolt-on squeegee bar available.

APPLICATION SPECIFIC DESIGN

Each Light Material Bucket is optimized for the customer's specific application. With the weight per cubic yard of your material, the engineers at Craig Manufacturing can maximize the capacity of the Light Material Bucket to utilize your machine to its full potential.

HOOK-UP CONFIGURATIONS

Available in a variety of hook-up configurations including Craig Quik Key, OEM coupler, and OEM pin-on. This allows the bucket to easily fit into your existing fleet of attachments and machines without the need of a new coupler.

CUSTOM VISIBILITY SLOTS

Optional visibility slots are available on Light Material Buckets. Visibility slots are customized for the customers' needs and application to provide visibility to the bucket edge.

Custom visibility slots available for your application.
